

**Midnight Ruffles Hellebore - New  
For 2019!**

*Helleborus 'Midnight Ruffles'*

Height: 16 inches

Spread: 24 inches

Spacing: 18 inches

Sunlight: ● ●

Hardiness Zone: 4a

Other Names: Lenten Rose, Winter Rose

Group/Class: Winter Thriller Series

**Description:**

This attractive variety produces bushy mounds of thick evergreen leaves; flower stalks, held occasionally above the foliage bear showy violet-rose blooms that mature to black, with contrasting butter yellow centers; a great selection for shade gardens

**Ornamental Features**

Midnight Ruffles Hellebore features showy nodding black cup-shaped flowers with rose overtones and buttery yellow eyes at the ends of the stems from late winter to early spring. Its attractive serrated oval compound leaves remain forest green in color throughout the year. The fruit is not ornamentally significant.

**Landscape Attributes**

Midnight Ruffles Hellebore is an herbaceous evergreen perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Midnight Ruffles Hellebore is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Naturalizing And Woodland Gardens

### **Planting & Growing**

Midnight Ruffles Hellebore will grow to be about 14 inches tall at maturity, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years.

This plant does best in partial shade to shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
